

OPSGUIDE AI

Source-Grounded Decision Support for Financial Aid Operations

HYDI MAQOUSI | Concept Creator - Product & Project Lead

BUSINESS OPPORTUNITY

Financial Solutions Advisors and Financial Aid Advisors may need to interpret changing federal rules alongside institutional guidance. Answers can be spread across Federal Student Aid resources, institutional policies, FAQs, training materials, and operational guidance. The challenge is finding the current rule, knowing which source controls, applying the correct effective date and student scenario, and verifying the answer quickly.

PROPOSED SOLUTION

OpsGuide AI gives advisors one conversational entry point to approved knowledge. It identifies applicable federal authority and institutional implementation guidance, provides a concise operational answer, exposes assumptions and calculations, links the evidence, and requests clarification or human review when facts are insufficient.

CORE CAPABILITIES

Advisor scenarios

Direct Loan annual/aggregate limits; dependency and grade-level logic; enrollment-based adjustments; Graduate and Parent PLUS 2026-27 changes; effective-date and legacy-exception logic; withdrawal/R2T4; military benefits; VA certification.

GOVERNANCE BY DESIGN

Responsible-AI controls

Federal-to-institution source hierarchy; approved public sources; transparent calculations; clarification for missing inputs; no invented policies; source links and metadata; conflict handling; human escalation.

POTENTIAL BUSINESS VALUE

Potential value: less time searching across websites and training resources; stronger source verification and consistency; faster new-hire ramp-up; fewer repetitive senior escalations; visibility into knowledge gaps and outdated guidance.

These are proposed pilot benefits, not claimed outcomes.

PILOT & SUCCESS MEASURES

Controlled pilot: start with one narrow financial-aid knowledge domain and approved non-sensitive sources. Measure time-to-answer, valid-citation rate, first-search resolution, advisor helpfulness, clarification/escalation frequency, and unanswered-search patterns before expansion.

PROPOSED PROJECT ROLE - HYDI MAQOUSI

Concept Creator | Product & Project Lead. Lead discovery, advisor workflow analysis, stakeholder requirements, source-governance design, prototype development, UAT planning/coordination, success metrics, pilot evaluation, iteration, and implementation planning. Demonstrates product management, project management, business analysis, AI governance, UX, knowledge management, and process-improvement capabilities.

PUBLIC DEMONSTRATION BOUNDARY

Uses publicly available Federal Student Aid / StudentAid.gov and UMGC webpages only. No confidential student data, internal university materials, or production-system access. Any employer pilot would require formal approval, security/privacy review, access controls, content ownership, version management, and human oversight.
